

XipLink XO-Options

XA - Appliances

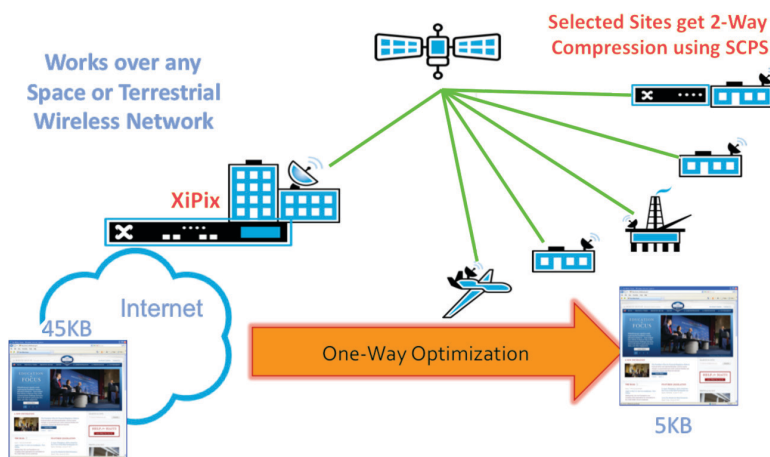

XiPix and HTTP Compression

XO - Options

XipLink Hub Optimizations (XHO) Option *Dramatic reduction of web bandwidth: serve three sites for the same bandwidth as two*

XipOS Hub Optimization features are bandwidth savings and performance enhancements that operate on a standalone appliance located at the hub-side or Internet point of presence in a wireless network. These features operate on unencrypted web traffic and are implemented in the XA-30K appliances that can be easily installed in the accessible environment of a network hub.

XS - Specialty Products

XE - Embedded XipOS

XHO Option

XiPix Image Compression

- Compresses images on-the-fly to consume much less bandwidth
- Retains page layout
- Controllable quality setting
- Applies to all JPGs

HTTP Gzip Compression

- HTML data from servers is compressed

Easy to Install at Network Hub

- No remote software to install
- Extendable for bracketted XA installations for full optimizations

TCP Acceleration (all products)

- Accelerated unidirectional push of TCP

Integrated QoS and Shaping (all products)

- Shape all IP with hierarchical Class Based Queuing. Intelligently integrated with TCP acceleration

*Software upgradeable option for
XA-30K Bandwidths up to 45Mbps*

SKU: XO-XHO30K
